(54) LIQUID-CRYSTAL DISPLAY MODULE

(57)Abstract:

PURPOSE: To reduce the power consumption of a liquid-crystal display module and to improve its picture quality by using high-impedance elements for input circuits of amplifiers which amplify divided voltages of a power source for driving liquid crystal.

CONSTITUTION: The voltage of the power source 6 for driving liquid crystal is divided by plural resistances 7aW7e so as to supply plural reference source voltages to a liquid-crystal driving circuit 10 which drive an optional point of a liquid-crystal display panel 11 selectively. The input circuits of amplifiers 8aW8d which amplify respective divided voltages V1WV5 are composed of high-impedance elements, e.g. FETs 9aW9d.

LEGAL STATUS

[Date of request for examination]

[Date of sending the examiner's decision of rejection]

[Kind of final disposal of application other than the examiner's decision of rejection or application converted registration]

[Date of final disposal for application]

[Patent number]

[Date of registration]

[Number of appeal against examiner's decision of rejection]

[Date of requesting appeal against examiner's decision of rejection]

[Date of extinction of right]
